Projects

Ticket Vending App

<https://github.com/jdidi94/Ticket-vending-app>

develops a scalable microservices app with Express.js, leveraging reusable code in custom NPM packages. Deployment uses Docker and Kubernetes for cloud scalability. Thorough testing ensures reliability, and code organization prioritizes modularity. Ongoing efforts enhance code reusability through refactoring and collaboration, fostering a robust microservices architecture

Tech Stack:

- **Languages:** JavaScript, C++
- **Frontend:** React, Angular
- **Backend:** Express
- **Database:** MySQL, MongoDB
- **Cloud:** Google Cloud, Azure

Tripma

<https://github.com/e-doctors-exclusive/travel>

Contributing to the mission of crafting user interfaces and implementing features for a flight booking web app. Responsibilities include developing the payment process, integrating real-time server notifications, implementing responsive design for specific web pages, and managing the authentication process.
